

NextGrid Technologies — 3-2-1 Backup Checklist

OneDrive is NOT a backup — real backup is immutable, tested, offsite | Updated: 25 July 2026 |
For SA SMEs 5-50 staff

1. 3 copies of data

Keep production + local backup + immutable cloud copy in SA (Cape Town/JHB). Medical practice deleted 3 years patient files — restored in 20 min because of this.

2. 2 different media

Local NAS with snapshots + cloud immutable storage with object lock. Ransomware can't encrypt both.

3. 1 offsite immutable

Cloud copy with immutability for 30+ days, undeletable even by Global Admin. Required for POPIA Sec 19.

4. Daily automated + weekly test

Automated M365 Mail/SharePoint/OneDrive/Teams backup daily. Test 1 file restore weekly — we send report.

5. 30+ day versioning

Keep 30-90 day point-in-time versions. Crypto-locker encrypts today, you restore from 2 days ago.

6. Separate admin accounts

Backup admin ≠ daily user. Attacker steals daily creds, can't delete backups.

7. RPO <24h, RTO <4h

Recovery Point Objective <24h, Recovery Time Objective <4h. Tested monthly, report for insurer.

8. What to test on R950 Health Check

We test: 1 file restore, immutability enabled, NAS snapshot age, M365 versioning 30d. Call 076 948 9154.
