

NextGrid Technologies — Phishing Spotter Guide 2026

4 new tricks hitting SA SMEs + 10-minute staff training | Updated: 25 July 2026 | For SA SMEs 5-50 staff

Trick 1: AI invoice with real thread

Attacker hijacks real supplier thread, inserts new bank details. Check: call supplier on known number to verify bank change.

Trick 2: Teams message from IT Helpdesk

Fake IT asks for MFA code. Real IT never asks for MFA code. Enable Teams external banner + Safe Links.

Trick 3: Fake Microsoft Unusual sign-in

Real-looking Microsoft logo, link to evilproxy. Hover link — if not microsoft.com, don't click. We block with anti-phishing policy.

Trick 4: AI voice clone of boss

Boss says 'Pay urgently'. Verify via WhatsApp video call or second person approval for >R5k payments.

10-min training we do

Show 3 real examples, enable Safe Links to block clicks at time-of-click, enable external email banner [External], monthly tip in Teams.

What R950 Check does

We check: Safe Links ON, anti-impersonation for CEO, external banner ON, finance team verification process documented.
